Rather than the relatively more straightforward idea of time travel seen in similar movies, where the characters actually jump backwards or forwards through time to fixed points and the audience follows them on that journey, Tenet uses time reversal, or time inversion. This is a rather different approach and an important distinction, because time travel still adheres to the general rules of physics, at least in so far as there remains a cause and effect to every action.

Although humans can't hop into a time machine and go back in time, we do know that clocks on airplanes and satellites travel at a different speed than those on Earth. We all travel in time! We travel one year in time between birthdays, for example. And we are all traveling in time at approximately the same speed: 1 second per second.

Physicists reverse time using quantum computer

Retrocausality, or backwards causation, is a concept of cause and effect in which an effect precedes its cause in time and so a later event affects an earlier one. In quantum physics, the distinction between cause and effect is not made at the most fundamental level and so time-symmetric systems can be viewed as causal or retrocausal. Philosophical considerations of time travel often address the same issues as retrocausality, as do treatments of the subject in fiction, but the two phenomena are
